

Task Manager in "C" → ONLY using CLI

8/12/2023
-Adam Wu

idea: to keep track of what I need to do in my day. This will be a very basic task manager, can be improved in the future.

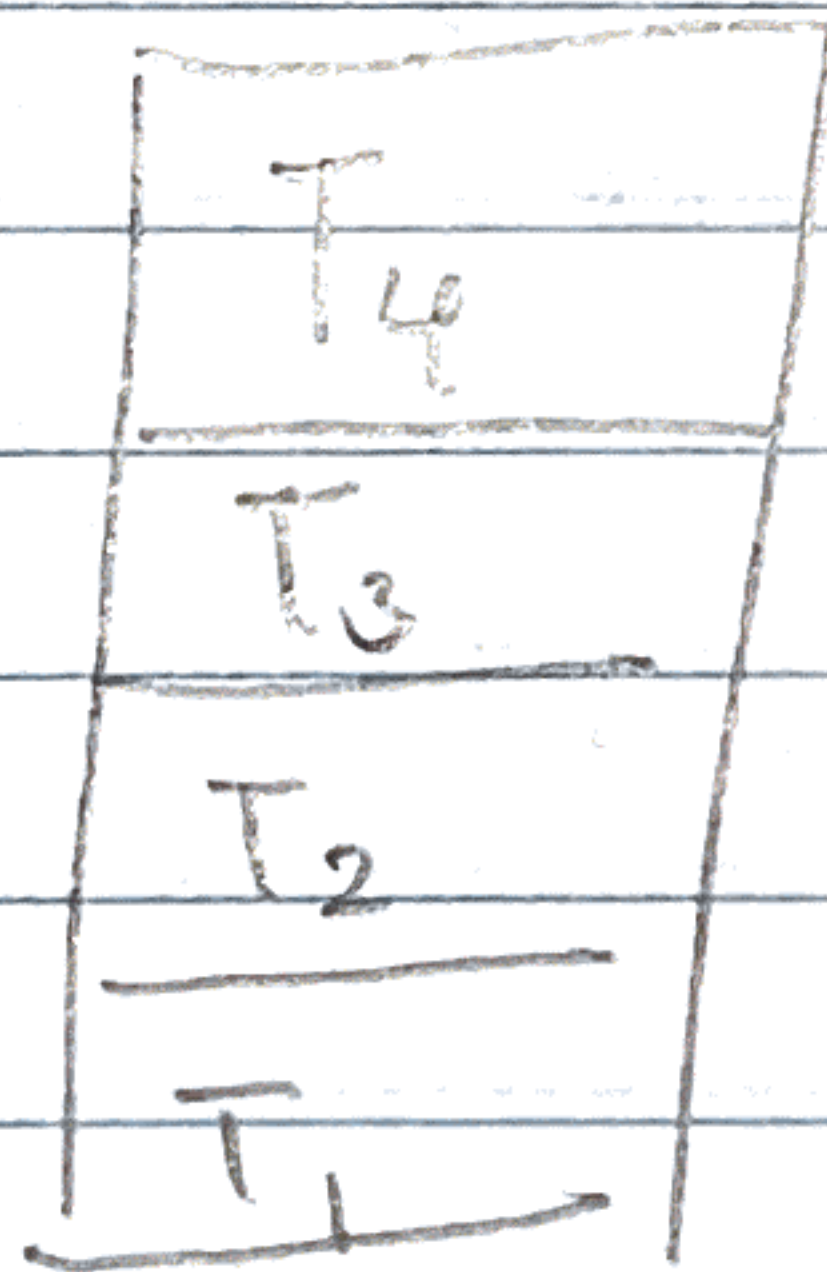

Functionality:

The available CLI options are:

- "a" for adding a task
 - "l" for listing task(s)
 - "r" for removing tasks
 - "c" for clearing all tasks
- } Basic first

data structure: using stacks or linked lists

stacks:

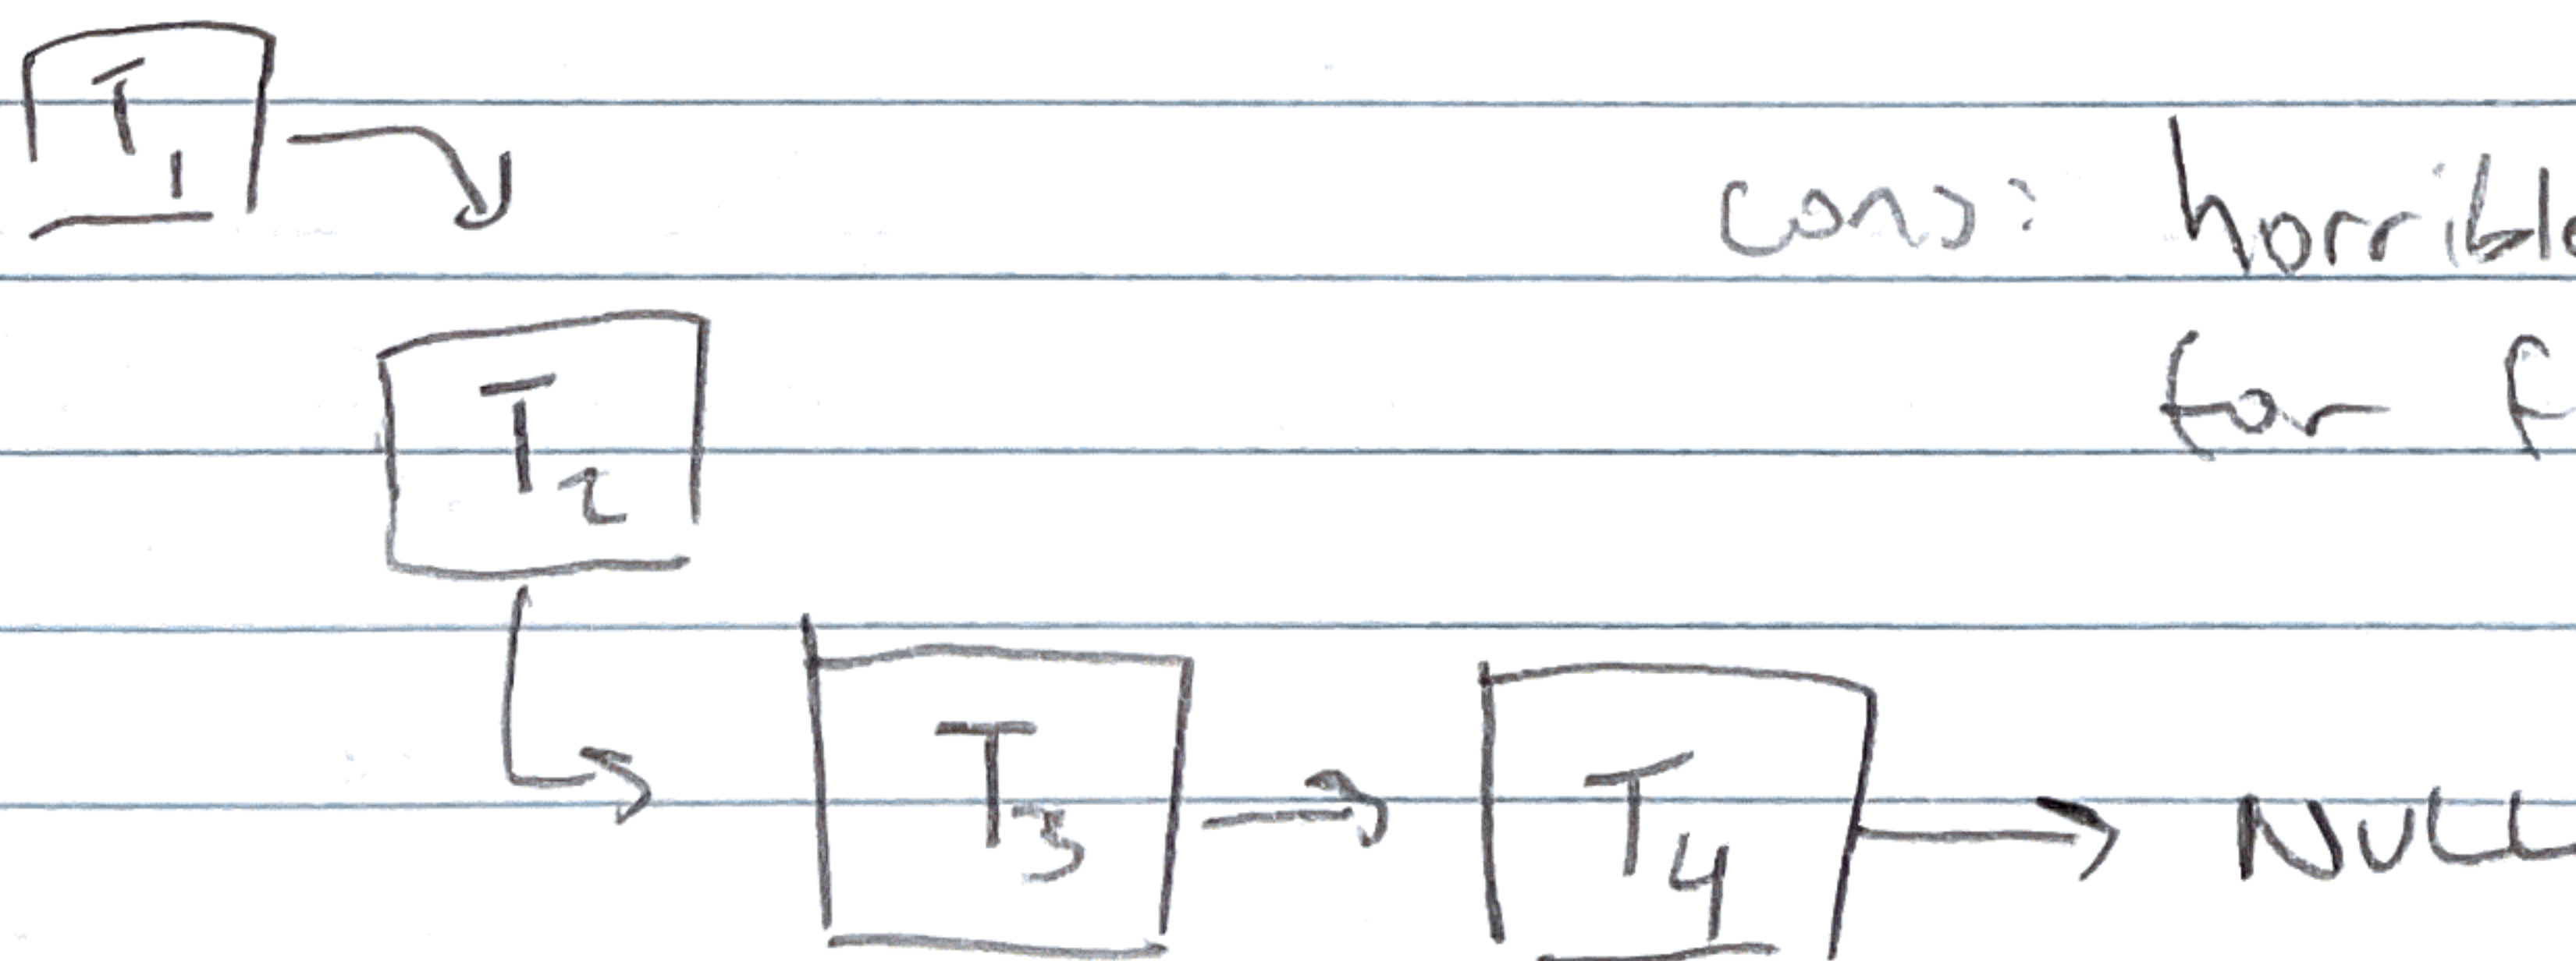

Pros: easily remove
a ~~*~~ specified
task

Cons: use more data ~~tests~~

Linked List:

Pros: efficient mem, easy
implement

Cons: horrible efficiency
for find tasks
